Internet Broadcasting - Olympic Tower Camera

Overview

AME Aigner Media & Entertainment GmbH (AME) is a professional solution partner specializing in the convergence of classic and digital media. AME uses innovative technologies for live video distribution through the Internet and is the author of PAYperSTREAM™, the first theft protection scheme for audio and video content. AME is the exclusive European integration partner for LiveWave camera control software solutions.

AME has partnered with t-info, a subsidiary of Deutsche Telekom AG and Europe's largest telecommunications company. t-info offers extensive directory services through its website, services that are also available via mobile phones and PDAs. In addition to all the data from Germany's phone directories, t-info also provides content to assist in everyday life; from general information to weather forecasts and traffic reports.

The AME/t-info partnership has installed the world's highest controllable Internet camera at 720 feet above ground level. It is located on the Olympic Tower at the world-famous Olympic Park in Munich, Germany. It provides wonderful vistas of the Alps, the Olympic Village, BMW's headquarters and many architectural works of art built throughout the centuries.

This system consists of a Pelco Esprit IOP camera, a FirstView® Server and an Enterprise Server.
